Sep. 10, 2020 – Researchers have discovered a biomarker that can detect autism spectrum disorder (ASD) in preschool-aged children. The new study found that levels of the protein FABP4 were much ...

Autism News -- ScienceDaily

Key facts. One in 160 children has an autism spectrum disorder (ASD) (1). ASDs begin in childhood and tend to persist into adolescence and adulthood. While some people with ASD can live independently, others have severe disabilities and require life-long care and support. Evidence-based psychosocial interventions, such as behavioural treatment and parent skills training programmes, can reduce difficulties in communication and social behaviour, with a positive impact on well-being and quality ...
