Adding further components to the selection, it soon becomes apparent that it is possible to link more of these actions together - and the concept of a ' mechanical chain reaction ' develops: the movement of one object leads to that of another and then another; limited by the number of components that are available and the skill of the creator to arrange these in such a way that sufficient energy from one component is passed to the next to enable that object to move.

Fission chain reactions and their control. The emission of several neutrons in the fission process leads to the possibility of a chain reaction if at least one of the fission neutrons induces fission in another fissile nucleus, which in turn fissions and emits neutrons to continue the chain. If more than one neutron is effective in inducing fission in other nuclei, the chain multiplies more rapidly.

The hardware is already installed in each of us. More than 90 percent of humans just let their lives play out. What happens just happens, and what will be will be. Somehow, the other 10 percent got a different user's manual, and it says that we are totally in control of who we are. We choose our Identity. We design our destiny. It is simply our choice, not a birthmark or a birthright. Those of us who find out later in life that who we have been up until now is not who we have to be going forward, are energized and empowered. We can be more than our past. We can literally change who we are today. Our future is ours, every moment of it. We control our Identity, and we control our Mindset. Combined, our Identity and Mindset create our performance. We control the amount of success in our lives.

others, it will be truly life-changing – namely those living in countries where rule of law is weak, concepts of ownership are vague and, consequently, trust in institutions is in scarce supply. With blockchain, we are about to witness a leapfrogging – one that will bring the next billion emerging consumers into the formal economy by creating reliable institutions of contract, ownership and trust among people previously denied such luxuries. The authors humanize the technology by taking the reader on a global journey through a multitude of applications – from registering property to voting and delivering aid. In place of the usual abstract lessons in complex technology, this book is instead filled with lively anecdotes of places where trust is so weak that a crisp dollar bill
