The only respiratory care text devoted exclusively to patient assessment! By performing a thorough patient assessment, you'll be able to assist physicians in the decision-making process regarding treatment, in evaluating the treatment's effectiveness, and in determining if changes in the treatment need to be made. The book's comprehensive approach covers all of the most important aspects and topics of assessment. This edition is streamlined to emphasize learning objectives. And you can prepare for the CRT exam more effectively with the new NBRC Exam Matrix Correlation Guide! A comprehensive approach covers all of the most important aspects of assessment, so you can assess patients effectively. Additional Questions to Ask About boxes list questions that you should ask patients (e.g., coughing, sputum, shortness of breath) or ask yourself (e.g., lung sounds you are hearing, blood pressure, respiratory rate). Learning objectives, chapter outlines, chapter overviews, and key terms lists begin each chapter, preparing you for the key topics and content you will learn. Key Point summaries and assessment questions reflect and emphasize the key information identified in the learning objectives. Answers to assessment questions help you review by including rationales and page references to the textbook, by reflecting the NBRC format, and by supporting learning objectives. Enhanced Simply Stated boxes emphasize important concepts. Additional case studies help you apply chapter content to clinical scenarios. Content from the text is related to the NBRC exam matrix for the CRT exam on a companion Evolve website, helping you better prepare for the difficult board exams. A new Neurological Assessment chapter focuses on conscious sedation. A discussion of health literacy addresses the importance of determining the patient's level of understanding when conducting a patient assessment. Discussions of the assessment of the obese patient prepare you for some of the unique challenges related to assessing obese patients (e.g., the physical exam and chest x-ray). Key Point summaries in every chapter emphasize the learning objectives and provide an easy-to-find overview. A list of abbreviations common to assessment is included on the inside of the cover for quick reference. Procedure checklists for common assessment procedures are included in a new appendix, with PDFs of the forms available on the Evolve website.

Resource added for the Respiratory Therapist program 105151.

Thoroughly revised and updated, CLINICAL ASSESSMENT IN RESPIRATORY CARE teaches assessment techniques from the most basic skills for the student learning the process of patient care, to the more advanced skills for the student or practitioner involved with patients in the intensive care unit. An entirely new section will teach students and practitioners the skills necessary to record patient cases. The Instructor's Manual/Test Bank allows instructors to customize their approach to assessment and includes a ready-made selection of test questions. Covers the basics of patient assessment from the first encounter, including how to initially approach, interview, monitor, and examine the patient in a professional and sensitive manner. Teaches the student to recognize basic and life/ECG patterns that may occur in the cardiopulmonary patient. Discusses the unique situations that apply to neonatal and pediatric patients, differences in assessment, and how to document the young patients history and interpret test results. Covers monitoring patients with sleep-related breathing disorders by discussing normal sleep patterns and the causes and effects of some of the more common sleep disorders, such as sleep apnea. Includes learning objectives, outlines, overviews, summaries, and outstanding review questions in each chapter. Covers special assessment techniques for caring for the adult patient, including reducing communication barriers, the effects of vision and hearing loss on assessment, age-related structural and physiological changes, and specific diagnostic tests. Features a new chapter describing the use of the fiberoptic bronchoscope, including important technical aspects, complications, risks, patient preparation, and some of the most frequent indications for use. Uses case studies to address how respiratory therapists should document the patient history and physical examination using the SOAP (Subjective, Objective, Assessment, Plan) format as they develop care plan for their patients. Incorporates Simply Stated boxes to summarize key points, so students can easily identify and locate the most important information. Provides an Instructors Manual/Test Bank with valuable suggestions on effectively using the text within a curriculum, and includes a readyselection of test questions. Free with qualified adoptions.

Master the patient assessment skills you need to provide effective respiratory care! Wilkins' Clinical Assessment in Respiratory Care, 9th Edition prepares you to assist physicians in the decision-making process regarding treatment, evaluation of the treatment's effectiveness, and determining if changes in the treatment need to be made. Chapters are updated to reflect the latest standards of practice and the newest advances in technology. From lead author Dr. Albert Heuer, a well-known educator and clinician, this market-leading text also aligns content with National Board for Respiratory Care exam matrices to help you prepare for success on the NBRC's CRT and RRT credentialing exams. Comprehensive approach addresses all of the most important aspects and topics of assessment, so you can learn to assess patients effectively. Case studies provide real-life clinical scenarios challenging you to interpret data and make accurate patient assessments. Questions to Ask boxes identify the questions practitioners should ask patients (e.g., coughing, sputum, shortness of breath) or questions to ask themselves (e.g., lung sounds they are hearing, blood pressure, respiratory rate) when confronted with certain pathologies. Learning objectives, key terms, and chapter outlines begin each chapter and introduce the content to be mastered. Assessment questions in each chapter are aligned to the learning objectives and reflect the NBRC Exam format, with answers located on the Evolve companion website. Key Points at the end of each chapter emphasize the topics identified in the learning objectives, providing easy review. Simply Stated boxes highlight and summarize key points to help you understand important concepts. NEW! Updated content throughout the text reflects the latest evidence-based practices and clinical developments, including infection control measures, imaging techniques, assessment of critically ill patients, and the increased reliance on telehealth and electronic health records. NEW! Updated and revised content aligns with the latest NBRC credentialing exam matrix. NEW! Take-Home points are included for each chapter, plus cases as well as questions and answers for students to use in testing and applying their knowledge.

For all students and clinicians assessing or caring for patients with cardiopulmonary disorders, Respiratory Care: Patient Assessment and Care Plan Development is a must-have resource. As the most comprehensive reference available, it is a guide to the evaluation of the patient, and the development and implementation of an appropriate, evidence-based, respiratory care plan. Respiratory Care: Patient Assessment and Care Plan Development describes the purpose of patient assessment and then guides the reader through the process of the reviewing existing data in the medical record, conducting the patient interview, performing the physical assessment, and finally evaluating the diagnostic studies needed and implementing a respiratory care plan. Bridging the gap between patient assessment and treatment, the reader will learn how to apply assessment skills to the development and implementation of respiratory care plans. Integrated throughout each chapter are Clinical Focus exercises, RC 1s

Learn to assess and treat respiratory care disorders! Now in full color, Clinical Manifestations and Assessment of Respiratory Disease, 6th Edition bridges normal physiology and pathophysiology to provide a solid foundation in recognizing and assessing conditions. Authors Terry Des Jardins and George G. Burton describe how to systematically gather clinical data, formulate an assessment, make an objective evaluation, identify the desired outcome, and design a safe and effective treatment plan, while documenting each step along the way. Unique coverage of Therapist-Driven Protocols (TDPs) prepares you to implement industry-approved standards of care. Unique! Clinical scenarios connect to specific diseases so you can better understand the disease and the treatment modalities used. Unique! A focus on assessment and Therapist-Driven Protocols (TDPs) emphasizes industry-approved standards of care, providing you with the knowledge and skills to implement these protocols into patient care. Case studies help in applying information to assessment and treatment. Overview boxes summarize the clinical manifestations caused by the pathophysiologic mechanisms of each disorder. End-of-chapter questions include multiple-choice, short answer, matching, and case studies to test knowledge and understanding, pointing out areas that might require further study. A glossary of key terms with definitions is included in the back of the book. Appendices offer easy access to information such as calculations, symbols, medications, and measurements, plus answers to selected case studies. A unique full-color design enhances content and shows realistic examples of diseases and conditions. Student-friendly features reinforce learning with chapter outlines, objectives, and key terms. A consistent presentation of disease information shows background, treatment, and assessment for each condition so you learn the material in a clear, cohesive manner. Over 15 additional case studies with answers are added to the companion Evolve website.

A long time favorite, the fifth edition of BASIC CLINICAL LAB COMPETENCIES FOR RESPIRATORY CARE: AN INTEGRATED APPROACH continues to bring classroom theory to life at the bedside. Known for its integration of theoretical knowledge and practical skills, this text emphasizes the importance of assessment of need, contraindications, hazards/complications, monitoring, and outcomes assessment in respiratory care. Concise, direct, and easy to understand, this fifth edition has been updated to reflect recent advances in the field in order to ensure that students have the knowledge and skills needed to practice the art and the science of respiratory care.
