What is coronary artery disease? Every year, millions of patients are diagnosed with some form of heart disease, and one of the most common is atherosclerosis. At 32% cardiovascular disease was the leading cause of death worldwide. Atherosclerosis is commonly referred to as "hardening of the arteries".

~~Coronary artery bypass grafting (CABG)~~

Overview. Coronary artery disease develops when the major blood vessels that supply your

heart become damaged or diseased. Cholesterol-containing deposits (plaques) in your coronary arteries and inflammation are usually to blame for coronary artery disease. The coronary arteries supply blood, oxygen and nutrients to your heart.

~~Coronary artery disease—Symptoms and causes—Mayo Clinic~~

Patients with Ischemic heart conditions must take a mixture of medicine to scale back the heart's oxygen consumption, dilate the coronary arteries, and stop forming a replacement blockage. Nitro-glycerine and its derivatives (nitrates, either as tablets or transdermal patches) are known as vasodilators.

~~Coronary Artery Disease: Symptoms, Risk Factors, and Treatment~~

Coronary artery disease, also called CAD, coronary or atherosclerotic heart disease, is a serious condition caused by a buildup of plaque in your coronary arteries, the blood vessels that bring...

~~Coronary Artery Disease: Symptoms, Causes, Diagnosis ...~~

Coronary artery disease (CAD) is the most common type of heart disease. It is the leading cause of death in the United States in both men and women. CAD happens when the arteries that supply blood to heart muscle become hardened and narrowed. This is due to the buildup of cholesterol and other material, called plaque, on their inner walls.

~~Coronary Artery Disease | CAD | MedlinePlus~~

Methods We prospectively enrolled 40 patients with or without known diabetes mellitus who had epicardial coronary artery disease referred for coronary angiography and were not treated with diabetic medications. Of these, two had a significant stenosis in the left main coronary artery and were therefore excluded from the analyses.

~~Coronary Flow Reserve and Glycemic Variability in Patients ...~~

Patients with diabetes have an increased risk of developing CV disease presenting as coronary artery disease, MI, stroke or heart failure. For decades, patient management has been classified as either primary prevention (no cardiovascular disease) or secondary prevention (cardiovascular disease present).
