Wheeler's Dental Anatomy, Physiology and Occlusion - E ...

Occlusion, in a dental context, means simply the contact between teeth. More technically, it is the relationship between the maxillary and mandibular teeth when they approach each other, as occurs during chewing or at rest. Static occlusion refers to contact between teeth when the jaw is closed and stationary, while dynamic occlusion refers to occlusal contacts made when the jaw is moving. The masticatory system also involves the periodontium, the TMJ and the neuromusculature, therefore the tool

Wheeler's Dental Anatomy, Physiology and Occlusion ...

Dental anatomy is a field of anatomy dedicated to the study of human tooth structures. The development, appearance, and classification of teeth fall within its purview. (The function of teeth as they contact one another falls elsewhere, under dental occlusion.)Tooth formation begins before birth, and the teeth's eventual morphology is dictated during this time.
