Introduction To Electronics 5th LabVIEW & Digital Logic - EG1003 Lab Manual

Basically, all logic gates have one output and two inputs. Some logic gates like NOT gate or Inverter has

only one input
and one output.
The inputs of
the logic gates
are designed to
receive only
binary data
(only low 0 or
high 1) by
receiving the
voltage input.
The low logic
level represents
Zero volts and

high logic level
represents 3 or
5 volts positive
supply voltage.
