Language ideology is used within anthropology, sociolinguistics, and cross-cultural studies, to characterize any set of beliefs about languages as they are used in their social worlds. When recognized and explored, language ideologies expose how the speakers' linguistic beliefs are linked to the broader social and cultural systems to which they belong, illustrating how the systems beget such beliefs. By doing so, language ideologies link implicit and explicit assumptions about a language or lang

The topic of Language and Ideology has increasingly gained importance in the linguistic sciences. The general aim of critical linguistics is the exploration of the mechanisms of power which establish inequality, through the systematic analysis of political discourse (written or oral). This reader contains papers on a variety of topics, all related to each other through explicit discussions on the notion of ideology from an interdisciplinary approach with illustrative analyses of texts from the media, newspapers, schoolbooks, pamphlets, talkshows, speeches concerning language policy in Nazi-Germany, in Italofascism, and also policies prevalent nowadays. Among the interesting subjects studied are the jargon of the student movement of 1968, speeches of politicians, racist and sexist discourse, and the language of the green movement. Because of the enormous influence of the media nowadays, the explicit analysis of the mechanisms of manipulation, suggestion, and persuasion inherent in language or about language behaviour and strategies of discourse are of social relevance and of interest to all scholars of social sciences, to readers in all educational institutions, to analysts of political discourse, and to critical readers at large.

"Language ideologies" are cultural representations, whether explicit or implicit, of the intersection of language and human beings in a social world. Mediating between social structures and forms of talk, such ideologies are not only about language. Rather, they link language to identity, power, aesthetics, morality and epistemology. Through such linkages, language ideologies underpin not only linguistic form and use, but also significant social institutions and fundamental notions of person and community. The essays in this new volume examine definitions and conceptions of language in a wide range of societies around the world. Contributors focus on how such defining activity organizes language use as well as institutions such as religious ritual, gender relations, the nation-state, schooling, and law. Beginning with an introductory survey of language

ideology as a field of inquiry, the volume is organized in three parts. Part I, "Scope and Force of Dominant Conceptions of Language," focuses on the propensity of cultural models of language developed in one social domain to affect linguistic and social behavior across domains. Part II, "Language Ideology in Institutions of Power," continues the examination of the force of specific language beliefs, but narrows the scope to the central role that language ideologies play in the functioning of particular institutions of power such as schooling, the law, or mass media. Part III, "Multiplicity and Contention among Ideologies," emphasizes the existence of variability, contradiction, and struggles among ideologies within any given society. This will be the first collection of work to appear in this rapidly growing field, which bridges linguistic and social theory. It will greatly interest linguistic anthropologists, social and cultural anthropologists, sociolinguists, historians, cultural studies, communications, and folklore scholars.

The political revolutions which established state socialism in the Soviet Union and Eastern Europe were accompanied by revolutions in the word, as the communist project implied not only remaking the world but also renaming it. As new institutions, social roles, rituals and behaviours emerged, so did language practices that designated, articulated and performed these phenomena. This book examines the use of communist language in the Stalinist and post-Stalinist periods. It goes beyond characterising this linguistic variety as crude "newspeak", showing how official language was much more complex – the medium through which important political-ideological messages were elaborated, transmitted and also contested, revealing contradictions, discursive cleavages and performative variations. The book examines the subject comparatively across a range of East European countries besides the Soviet Union, and draws on perspectives from a range of scholarly disciplines – sociolinguistics, anthropology, literary and cultural studies, historiography, and translation studies. Petre Petrov is an Assistant Professor in the Department of Slavic Languages and Literatures at the University of Texas at Austin. Lara Ryazanova-Clarke is Head of Russian and Academic Director of the Princess Dashkova Russia Centre in the School of Literatures, Languages and Cultures at the University of Edinburgh.

This book focuses on how sign language ideologies influence, manifest in, and are challenged by communicative practices. Sign languages are minority languages using the visual-gestural and tactile modalities, whose affordances are very different from those of spoken languages using the auditory-oral modality.

The book deals with the linguistic base of political discourse. It offers a theoretical model of the imbalance of power in human interaction from language communication to socio-political relations. It uses the basic principles of social semiotics to create a match between sociolinguistics and political science. The structural "semiology" of Ferdinand de Saussure and Roland Barthes' and Lévi-Strauss' "myth" theories are referred to in support of the idea that human collective psychology is regularly manipulated by politically-based ideological narratives that "go without saying". In the movement "out" of the structuralist binary oppositions between "right" and "wrong", Derrida's post-structural "deconstruction" contributes to the critique of western liberal democracy as regards "equality" and communal knowledge about the political truth. The book will appeal to

researchers and university students of both linguistics and political science, as well as specialists in philosophy of language, philosophy of politics, communication theory and social psychology.

CDA and PDA Made Simple cuts many long stories short and encapsulates a long-standing tradition in modern and contemporary linguistics. The theoretical scope of the book encompasses a lengthy review of relevant studies in the area of critical discourse analysis (CDA), and, more broadly, in the areas of power, control, ideology and politics as realized and enacted in discourse. The book also brings together a detailed theoretical background on the main tenets and assumptions, tools and recipes, trends and extensions and critiques and applications of critical and political discourse analysis (PDA). Its analytical focus is predominantly on how ideology and power are linguistically and meta-linguistically realized, specifically through transitivity, modality, metadiscourse and presupposition in some discourse genres in English.

How does a country find itself 'at war' over spelling? This book focuses on a crucial juncture in the post-communist history of the Czech Republic, when an orthographic commission with a moderate reformist agenda found itself the focus of enormous public controversy. Delving back into history, Bermel explores the Czech nation's long tradition of intervention and its association with the purity of the language, and how in the twentieth century an ascendant linguistic school - Prague Functionalism - developed into a progressive but centralizing ideology whose power base was inextricably linked to the communist regime. Bermel looks closely at the reforms of the 1990s and the heated public reaction to them. On the part of language regulators, he examines the ideology that underlay the reforms and the tactics employed on all sides to gain linguistic authority, while in dissecting the public reaction, he looks both at conscious arguments marshaled in favor of and against reform and at the use, conscious and subconscious, of metaphors about language. Of interest to faculty and students working in the area of language, cultural studies, and history, especially that of transitional and post-communist states, this volume is also relevant for those with a more general interest in language planning and language reform. The book is awarded with the "The George Blazyca Prize in East European Studies 2008".

This critical ethnographic school-based case study offers insights on the interaction between ideology and the identity development of individual English language learners in Singapore. Illustrated by case studies of the language learning experiences of five Asian immigrant students in an English-medium school in Singapore, the author examines how the immigrant students negotiated a standard English ideology and their discursive positioning over the course of the school year. Specifically, the study traces how the prevailing standard English ideology interacted in highly complex ways with their being positioned as high academic achievers to ultimately influence their learning of English. This potent combination of language ideologies and circulating ideologies created a designer student immigration complex. By framing this situation as a complex, the study problematizes the power of ideologies in shaping the trajectories and identities of language learners.
