own small-scale smart robot that uses specialized programming and hardware to complete a mission. EV3 is a robotics platform for enthusiasts of all ages and experience levels that makes prototyping robots accessible to all. This book will walk you through six different projects that range from intermediate to advanced level. The projects will show you building and programming techniques that are used by engineers in the real world, which will help you build your own smart robot. You'll see how to make the most of the EV3 robotics platform and build some awesome smart robots. The book starts by introducing some real-world examples of smart robots. Then, we'll walk you through six different projects and explain the features that allow these robots to make intelligent decisions. The book will guide you as you

build your own object-tracking tank, a box-climbing robot, an interactive robotic shark, a quirky bipedal robot, a speedy remote control race car, and a GPS-navigating robot. By the end of this book, you'll have the skills necessary to build and program your own smart robots with EV3. What you will learn

- Understand the characteristics that make a robot smart
- Grasp proportional beacon following and use proximity sensors to track an object
- Discover how mechanisms such as rack-and-pinion and the worm gear work
- Program a custom GUI to make a robot more user friendly
- Make a fun and quirky interactive robot that has its own personality
- Get to know the principles of remote control and programming car-style steering
- Understand some of the mechanisms that enable a car to drive
- Navigate to a destination with a GPS
