a 'meaningless' blank canvas at birth. The marks this canvas gathers over time are there to complete a picture – your picture. None of these marks are so permanent that you cannot erase them or paint over them. All of them, in some way, give meaning and significance to life. Some marks may appear to be running the

picture while others are so precious that we think they are the picture. But, in the final analysis, any masterpiece includes both light and shade; the one is not more important than the other. The story of YOUR life is captured in YOUR picture. Take responsibility for your canvas and seek ways to paint a picture that will

David Kellogg Lewis (1941-2001) was one of the most influential philosophers of the twentieth century. He made significant contributions to almost every area of analytic

philosophy including metaphysics, philosophy of language, philosophy of mind, and philosophy of science, and set the agenda for various debates in these areas which carry on to this day. In several respects he remains a contemporary figure, yet enough time has now passed for historians of philosophy to begin to study his

place in twentieth century thought. His philosophy was constructed and refined not just through his published writing, but also crucially through his life-long correspondence with fellow philosophers, including leading figures such as D.M. Armstrong, Saul Kripke, W.V. Quine, J.J.C. Smart, and Peter van Inwagen. His

letters formed the undercurrent of his published work and became the medium through which he proposed many of his well-known theories and discussed a range of philosophical topics in depth. A selection of his vast correspondence over a 40-year period is presented here across two volumes. As metaphysics

is arguably where Lewis made his greatest contribution, this forms the focus of Volume 1.

Arranged under the broad areas of Causation, Modality, and Ontology, the letters offer an organic story of the origins, development, breadth, and depth of his metaphysics in its historical context, as well as a glimpse into the

influence of his many interlocutors. This volume will be an indispensable resource for contemporary metaphysics and for those interested in the Lewisian perspective.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum,

# Get Free Little Can Be Mean

explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work.

Schwab argues that this revolution is different in scale, scope and complexity from any that have come before.

Characterized by a range of new technologies that are fusing the physical,

# Get Free Little Can Be Mean

digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA

# Get Free Little Can Be Mean

sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which

# Get Free Little Can Be Mean

global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials.

The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and

discusses the major  
impacts expected on  
government, business,  
civil society and  
individuals. Schwab also  
offers bold ideas on how  
to harness these changes  
and shape a better  
future--one in which  
technology empowers  
people rather than  
replaces them; progress  
serves society rather than  
disrupts it; and in which

# Get Free Little Can Be Mean

innovators respect moral and ethical boundaries rather than cross them.

We all have the opportunity to contribute to developing new frameworks that advance progress.
