Skin nonmelanocytic

tumor

Non-melanoma skin

cancer refers to a

group of cancers that

slowly develop in the

upper layers of the

File Type PDF

Non

skin. The term non-melanoma distinguishes these more common types of skin cancer from the less common skin cancer known as melanoma, which can be more serious. In the UK, around 147,000 new cases of non-melanoma skin cancer are diagnosed each year.

Benign melanocytic
lesions. Created 2008.

Learning objectives.

Describe and name
common benign

melanocytic lesions
(moles and freckles);

Introduction. In the
embryo, melanocytes

are derived from
stem cells in the

File Type PDF

Non

neural crest that normally migrate to the epidermis, where they are scattered along the basal layer. Melanocytes produce melanin within cytoplasmic packets called melanosomes.

...
Dermoscopy is useful
to distinguish
pigmented non-
melanocytic lesions
from benign and

File Type PDF

Non

malignant melanocytic lesions. There are specific features that help to distinguish these. Careful observation has resulted in the description of the dermoscopy of many non-pigmented lesions as well, which may be sometimes helpful in diagnosis for an itchy rash.
