Physics For Javascript Games Animation~~

Physics for JavaScript Games, Animation, and Simulations teaches you how to incorporate real physics, such as gravity, friction, and buoyancy, into your HTML5 games, animations, and simulations. It also includes more advanced topics, such as particle systems, which are essential for creating effects such as sparks or smoke.

Create a `var physics = new Physics()` and call `physics.play()` when you want to kick things off. With `physics.optimize(true)` it will keep track of particles rest state. During this time, when Physics sees that all particles are resting it discontinues its animation loop. Flexible: Physics source is requirified so you can take what you need.
