Place-keeping encompasses dimensions of long-term open space management – maintenance, partnerships, governance, funding, policy and evaluation – which have not been considered before as part of a holistic concept . These dimensions are inter-related and can be applied at a number of different scales such as site, neighbourhood, city and region.

Place-Keeping: Open Space Management in Practice: Dempsey ...

This EU-funded project brought together European partners to focus on the long-term management of open spaces, or what we now call place-keeping. This involves exploring innovative approaches to designing and managing an open space while securing its long-term future by getting the right people, funding, policies and evaluative processes in place.

Place-Keeping presents the latest research and practice on place-keeping – that is, the long-term management of public and private open spaces – from around Europe and the rest of the world. There has long been a focus in urban landscape planning and urban design on the creation of high-quality public spaces, or place-making. This is supported by a growing body of research which shows how high-quality public spaces are economically and socially beneficial for local communities and contribute positively to residents' quality of life and wellbeing. However, while large amounts of capital are spent on the creation of open spaces, little thought is given to, and insufficient resources made available for, the long-term maintenance and management of public spaces, or place-keeping. Without place-keeping, public spaces can fall into a downward spiral of disrepair where anti-social behaviour can emerge and residents may feel unsafe and choose to use other spaces. The economic and social costs of restoring such spaces can therefore be considerable where place-keeping does not occur. Place-Keeping also provides an accessible presentation of the outputs of a major European Union-funded project MP4: Making Places Profitable, Public and Private Open Spaces which further extends the knowledge and debate on long-term management of public and private spaces. It will be an invaluable resource for students, academics and practitioners seeking critical but practical guidance on the long-term management of public and private spaces in a range of contexts.

This edited volume defines and compares central aspects of governance and management related to urban open spaces (UOSs) such as long-term management, combined governance and management and strategic management of UOSs. Perspectives such as ethical considerations, user participation and changes in local governmental structures frame the governance and management of UOSs. Jansson and Randrup create a comprehensive resource detailing global trends from framing and understanding to finally practising UOS governance and management. They conclude by promoting positive changes, such as proactive management and strategic maintenance plans to encourage the creation of more sustainable cities. Illustrated in full colour throughout, this book is an essential read for students and academics of landscape architecture, planning and urban design, as well as those with a particular interest in governance and management of UOSs.

Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

Open Space Technology is a methodological tool that enables self-organizing groups of various sizes to deal with hugely complex issues in a very short period of time. Authored by the originator of Open Space Technology, this work presents a user's guide that details what needs to be done before, during, and after an Open Space event.

Urban planning is as broad as the scope of urban government, which is closest to the people. It is an essential pre-requisite to the successful performance of duties of urban government, because it does offer most logical approach to solving city's problems, arising from rapid urban growth and expansion, as well as from changing conditions affecting inner city. This book is about establishing what has gone wrong with urban planning in Delhi, and of fixing flawed urban planning in operation. In this context, it is pertinent to have an understanding of the metropolis of Delhi, as much as the urban planning process. The book describes the metropolis through its morphology, its socioeconomic profile, the way rich and the poor live, its built environment, mode of travel, and the administrative aspects of urban planning. This book is not only for town planners but also for the citizens of Delhi, with the intention of making them more aware and enlightened about urban planning and urban governance. Urban planning is making decisions that profoundly affect the form and character of Delhi metropolis, in which its citizens live and the manner of their lives.

The Pacific Northwest is green to the extreme. Yet a day trip can go from pristine wilderness to downtown Seattle, Portland, or Vancouver. How are these commercial and cultural hot spots keeping nature and growth in balance - and what's coming next? Trace the path from forests and fish to bikes and brews as *Planning the Pacific Northwest* continues the APA Planners Press series on how planning shapes major American cities.

Social cohesion is often perceived as being under threat from the increasing cultural and economic differences in contemporary cities and the increasing intensity of urban life. Public space, in its role as the main stage for social interactions between strangers, clearly plays a role in facilitating or limiting opportunities for social cohesion. But what exactly is social cohesion, how is it experienced in the

public realm, and what role can the design of city spaces have in supporting or promoting it? There are significant knowledge gaps between the social sciences and design disciplines and between academia and practice, and thus a dispersed knowledge base that currently lacks nuanced insight into how urban design contributes to social integration or segregation. This book brings together scholarly knowledge at the intersection of public space design and social cohesion. It is based on original scholarly research and a depth of urban design practice, and analyses case studies from a variety of cities and cultures across the Global North and Global South. Its interdisciplinary, cross-cultural analysis will be of interest to academics, students, policymakers and practitioners engaged with a range of subject areas, including urban design, urban planning, architecture, landscape, cultural studies, human geography, social policy, sociology and anthropology. It will also have significant appeal to a wider non-academic readership, given its topical subject matter.

Public Places Urban Spaces provides a comprehensive overview of the principles, theory and practices of urban design for those new to the subject and for those requiring a clear and systematic guide. In this new edition the book has been extensively revised and restructured. Carmona advances the idea of urban design as a continuous process of shaping places, fashioned in turn by shifting global, local and power contexts. At the heart of the book are eight key dimensions of urban design theory and practice—temporal, perceptual, morphological, visual, social, functional—and two new process dimensions—design governance and place production. This extensively updated and revised third edition is more international in its scope and coverage, incorporating new thinking on technological impact, climate change adaptation, strategies for urban decline, cultural and social diversity, place value, healthy cities and more, all illustrated with nearly 1,000 carefully chosen images. Public Places Urban Spaces is a classic urban design text, and everyone in the field should own a copy.

Containing the proceedings of the 9th International Conference on Urban Regeneration and Sustainability this book addresses the multi-disciplinary aspects of urban planning; a result of the increasing size of cities; the amount of resources and services required and the complexity of modern society. Most of earth ' s population now lives in cities and the process of urbanisation still continues generating many problems deriving from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the quality and standard of living. The process however, faces a number of major challenges, related to reducing pollution, improving main transportation and infrastructure systems. New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment, i.e. reduction in air, water and soil pollution as well as efficient ways to deal with waste generation. These challenges contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex mechanisms to manage. However, despite such complexity they represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. The challenge of planning sustainable cities lies in considering their dynamics, the exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly, supplied and maintained by natural systems. Topics covered include: Urban strategies; Planning, development and management; Urban conservation and regeneration; The community and the city; Eco-town planning; Landscape planning and design; Environmental management; Sustainable energy and the city; Transportation; Quality of life; Waterfront development; Case studies; Architectural issues; Cultural heritage issues; Intelligent environment and emerging technologies; Planning for risk; Disaster and emergency response; Safety and security; Waste management; Infrastructure and society; Urban metabolism.
