If a Router (DTE) is connected to a Modem (DCE) through RS232 interface. In order to send data from router to Modem, the following procedure must be used:- When router sends information, and the modem becomes ready to receive, it sends a DCE ready signal. When the router is ready to send data, it sends a Ready to send signal.

The RS-232 interface uses Asynchronous Framing (Known data width, 8bits) with NRZ encoding. The RS232 interface is synchronous when the clocks are used (DA / DB), otherwise its asynchronous. The RS232 interface is rated to operate up to 20kbps. Use TIA/EIA-562 (low voltage version of RS232) or TIA/EIA 423 for higher data rates.
