The Unfinished Game: Pascal, Fermat, and the Seventeenth-Century Letter that Made the World Modern. Keith Devlin. Before the mid-seventeenth century, scholars generally agreed that it was impossible to predict something by calculating mathematical outcomes. One simply could not put a numerical value on the likelihood that a particular event would occur.

But during the summer of 1654, renowned French mathematicians Blaise Pascal and Pierre de Fermat began a correspondence that would change all that. What began as an innocent discussion about a common gambler's dilemma known as the "unfinished game," would go on to create the concept of probability, which would in turn lead to the development of risk management.

The problem of points, also called the problem of division of the stakes, is a classical problem in probability theory. One of the famous problems that motivated the beginnings of modern probability theory in the 17th century, it led Blaise Pascal to the first explicit reasoning about what today is known as an expected value. The problem concerns a game of chance with two players who have equal chances of winning each round. The players contribute equally to a prize pot, and agree in advance tha
